How to print it via USB connecting to computer

## 1. Connecting USB to computer and Install the driver

After you finished your installation,you will find the correct "COM port" under the "Computer"- "Device Manager" ,maybe "COM 3" or "5" or others.
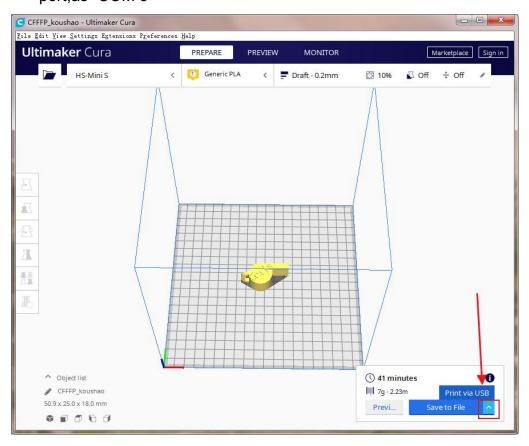

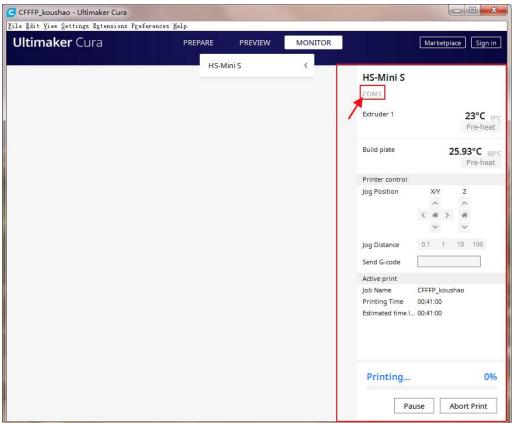

USB-SERIAL CH340 (COM3)

2. Slice and print

- Open your Cura 4.8 software,load one STL file,for example,load the whistle.Make sure your setting is ok,then slice it.
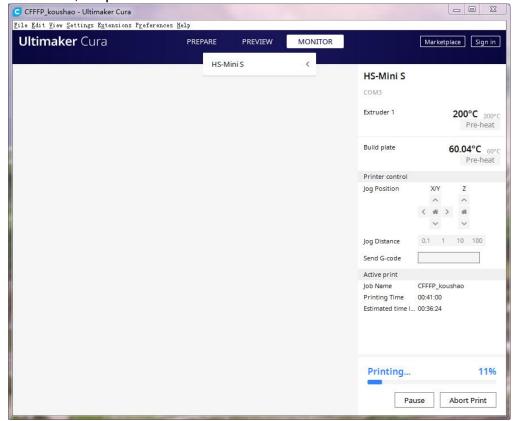

- Click "print via USB" ,it will show printing page,and you will find the COM port,as "COM 3"

- After both the temperature of extruder and build plate rise up to the setting value,the print will start to work.

(Note:Make sure your have insert the filament well and leveling well before printing)
